Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

Election/Restrictions

1. Applicant's election without traverse of Group III, claims 11-15,28,29 in Paper filed November 9, 2006 is acknowledged. Claims 1-10,16-27 have been canceled.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 11-15,28,29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okada et al. (US 6,190,798 B1) in view of Nishimura et al. (US 5,929,741) and Joshi (US 6,753,605 B2).

Okada et al. teach a battery comprising a case having an opening, an electrode assembly (7), a cover (2) made of aluminum and defining a hole (14), a sealing member (26) (plug) made of aluminum or aluminum alloys. See Figure 3, Column 3, Lines 26-30, Column 4, Lines 54-62, Column 5, Lines 34-60. Nishimura et al. teach a current protector, wherein the aluminum substrate is clad with a copper layer. See Example 5, Figure 7A. Joshi teaches the copper has a higher thermal and electrical conductivity than that of aluminum. See Column 2, Lines 48-63. Therefore, it would have been obvious to one of ordinary skill in the art to add a copper layer

Art Unit: 1745

onto the aluminum sealing member of Okada et al., because Nishimura and Joshi collectively teach the copper layer can increase the electrical conductivity of the sealing member.
